2010

Chain-of-Custody (COC) Auditing

I completed over eighty initial assessments, evaluations and annual audits for a wide variety of forest products companies interested in seeking or maintaining FSC COC certification. These companies include lumber mills, printers, secondary manufacturers, distributors and many more. In November, I successfully completed an ISO 19011 training course, required for all FSC lead auditors, that was focused on guidelines for quality and/or environmental management systems auditing.

Speaking Engagements

It was another busy year on the education front as it looks like the green building industry is the only bright spot in a rather bleak building products industry. The highlights this year were speaking at the Architectural Woodwork Institute's (AWI) National Convention in Denver, Colorado and Lewis & Clark Environmental Law School.

Professional Consulting Services

I provided a number of private clients with development of their Documented Control Systems (DCS), Controlled Wood Risk Assessments (CWRA) and analysis on how Minor Components (plastic laminates) need to be represented in their FSC finished products. I developed content for the Green Building page on the North American Building Materials Distribution Association website.

FSC-US in the Pacific Northwest

I collaborated with Mike Lipke of Turbo Wood on an industry/market research project that provided the direction for the PACNW Initiative. The focus of the research was the current FSC industry structure, results of an FSC industry survey, and challenges/outcomes for the industry to increase uptake of FSC-certified products in the Pacific Northwest.

Columnist for Green Building Products Dealer

During 2010 I wrote a three part series on Life-Cycle Analysis (LCA): 1) What is It? 2) LCA Systems 3) Why & The Future of LCA.

Conserve Cascadia

I partnered with Oregon State University, Mason, Bruce & Girard and other regional businesses to submit an USDA Small Business Innovation Research (SBIR) grant application that would fund further exploration of the idea to convert woody biomass into a regional, natural building insulation product.
